A K M Asaduzzaman

Staff Software Engineer · iOS

Dhaka, Bangladesh asaduzzaman.duet@gmail.com linkedin.com/in/asaduzzamanshuvro asaduzzaman.xyz

SUMMARY

iOS engineer with 12 years building native apps in Swift, SwiftUI and UIKit, currently a Staff Software Engineer consulting for DN Media Group via Cefalo. Hands-on across DN Media Group's eight news apps, including DN, Norway's leading business daily, and since 2025 across the Java and Spring Boot services behind them. Nine years working daily with Norwegian product teams in Oslo. Leads a five-engineer iOS and backend team through architecture standards, code review and mentoring; several engineers have moved into senior roles.

EXPERIENCE

Staff Software Engineer · DN Media Group · consultant via Cefalo 2025 - now

- Built and maintain the web-to-native bridge across all eight apps: web content posts navigation, sign-in, paywall and sharing events, native owns navigation, auth and device capabilities, and one shared contract lets each side ship independently.
- Migrated the shared networking, feed and auth modules to Swift 6 strict concurrency with async/await and actors, clearing data-race warnings across all eight apps.
- Build and ship SwiftUI features with product and design from discovery to release: sign-in and authentication flows, an in-app PDF reader, and the iOS 26 Liquid Glass adoption across the app family.
- Own the testing standard: unit tests for view models and networking, integration tests across the modular packages, and XCUITest flows for sign-in and critical paths, all run on every PR in GitHub Actions.
- Lead the iOS and backend teams (5 engineers): architecture and engineering standards across Swift/SwiftUI and Java/Spring Boot/RabbitMQ, and mentoring through code review that has moved several engineers into senior roles.
- Built the team's AI tooling on Claude Code: code-review agents, a tickets-to-branches plugin, and log root-cause and deployment skills, used daily by all five engineers. Agents take the first pass; human review decides what ships.

Apps: DN, TradeWinds, Upstream, Fiskeribladet, IntraFish, Recharge, IntraFish Norge, Europower

---

Senior Software Engineer · DN Media Group · consultant via Cefalo 2021 - 2025

- Led the iOS team that designed and shipped eight production apps for DN Media Group's brands.
- Built the server-driven UI layer used across all eight: the server defines screen composition, content and actions, the client renders from a shared component library with a fallback for unknown types, so editors change layouts without an App Store release.
- Introduced modularization with clear module ownership and dependency injection, cutting release time by 60% and letting five engineers ship in parallel, with Fastlane releases on GitHub Actions and Azure DevOps.
- Spearheaded the DN news app (290K downloads, 200K+ weekly active users, 99.3% crash-free) and engineered its feed for smooth scrolling under heavy image load with prefetching, image caching and cell reuse.
- Six months on the dn.no front page in TypeScript, Vue.js and Node, alongside the iOS work.

Software Engineer · SPENN · consultant via Cefalo 2017 - 2021

- Built SPENN, a cashless payments app launched in Rwanda and Tanzania, used by 30K people a week.
- Hardened it for finance: encryption, SSL pinning, and data protection against attacks.
- Delivered business-critical features end to end within financial regulations.

Apps: SPENN

Software Engineer · GagaGugu Ltd 2016 - 2017

- Built a social app with real-time audio/video calls (WebRTC), UDP-based messaging, a timeline feed, and contact sync.
- Shipped a Share Extension for cross-app sharing, and designed the timeline feed (posts and reactions).

Earlier · AdvanceApp Bangladesh · Arena Mobile BD · Nested Apps 2014 - 2016

- A fishing community and e-commerce app that grew to 50K+ active users, plus real-time shipment tracking.
- MyBL for Banglalink, one of Bangladesh's leading mobile carriers (150K downloads), with key architecture calls.
- Kaler Kantho, the news app of a leading Bangladeshi daily, and Shipero for tracking parcels and goods.
- A cartoon image maker (100K downloads) with a custom lazy-loading image grid.

SELECTED WORK

DN, Norway's business news on iOS apps.apple.com/app/id1518764819

The iOS app for Dagens Næringsliv, Norway's leading business daily: a fast, hitch-free news feed for 30K+ daily and 200K+ weekly readers.

SPENN, cashless payments on iOS

Mobile money on iOS for Rwanda and Tanzania. The security and reliability work behind a regulated payments product, from transfer flows to data protection.

TripSplit github.com/asaduzzaman-shuvro/TripSplitter

A SwiftUI app for splitting group and trip expenses, with offline peer-to-peer sync and CloudKit backup.

Braze engagement connector

A Java service that connects DN Media Group's client systems to Braze for customer-engagement messaging, moving 100K+ events a day.

SKILLS

Mobile	Swift, Swift 6, SwiftUI, UIKit, Liquid Glass (iOS 26), Combine, Swift Concurrency, Observation, SwiftData, Objective-C, MVVM, MVVM-C, Clean Architecture, Modularization, Server-driven UI, Swift Package Manager, XCFramework, WKWebView, Web-to-native bridge, XCTest, XCUITest, Accessibility, PDFKit, SSL pinning, Encryption, OWASP Mobile Top 10, Push notifications, WebRTC, Fastlane, CI/CD, Crashlytics
Backend & web	Java, Spring Boot 3, RabbitMQ, Braze, REST APIs, TypeScript, Vue.js, Node.js
Leadership	Team leadership, Servant leadership, Mentoring, Code review, Stakeholder communication, Product discovery, Agile delivery, Cross-functional collaboration
AI	Claude Code, Codex, Cursor, AI-assisted development, AI code review, Agentic workflows

EDUCATION

B.Sc. Computer Science & Engineering · 2014
Dhaka University of Engineering & Technology (DUET)

LANGUAGES

English · Advanced (C1)
Bengali · Native (C2)
